EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Pursuant to MPEP § 606.01, the title has been changed to --SPINDLE MOTOR HAVING MOUNTING PLATE WITH SPACE FOR CONNECTING AND HAVING CIRCUIT BOARD COVERED BY ROTOR FOR A SLIM OPTICAL DISK APPARATUS--.

2. The following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor suggests a circuit board within a range covered by a rotor, said circuit board having electronic components and electric contacts in combination with a mounting plate having an area, vacant area or raised area providing a space required for connecting electric contacts with an external connecting piece.

Although Kumagai et al (US Pat. No. 5572384) show mounting plate 23 with a void area in correspondence by position with electric contacts of flexible printed circuit 26, the reference is silent regarding the circuit board having electronic components used on a spindle motor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2653

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sasaki et al (US Pat. No. 6204583 B1) show a motor centerpiece (see especially 3).

Rugg et al (US PAP No. 2004/0037007 A1) show pigtail lead 264 connected to a spindle motor.

Komatsu et al (US PAP No. 2003/0039060 A1) show connecting end portion 69 connected to the flexible board 67 for a spindle motor.

Sekine (US PAP No. 2001/0053040 A1) shows reinforcing plate 1 and circuit board 2 with lands 2f for connecting external leads.

Zhao et al (US Pat. No. 5923110) show a spindle motor comprising mounting member 1 and circuit board 2.

4. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system.
